The Guide is provided free of charge, "as is" and for informational purposes only, without warranty of any kind. It is neither intended nor suitable to establish any legal relationship between the reader and NXGEN or its affiliates, including, without limitation, any obligation of NXGEN or its affiliates toward the reader.

The obligations of NXGEN and its affiliates in respect of NXGEN products or services purchased by a customer are governed exclusively by the terms of the agreement under which those products or services were purchased.

For clarification

The reader bears the entire risk as to the use, results and performance of the Guide. To the fullest extent permitted by applicable law, NXGEN disclaims and excludes all warranties, whether statutory, express or implied — including, without limitation, implied warranties of merchantability, fitness for a particular purpose, title and non-infringement of third-party rights — as well as any liability or warranty arising from suggestions, specifications or samples related to the Guide.

Rollout Progress

Updated 8 October 2026

experience — not included in the PDF

Summary

Rollout Progress summarizes deployment health for the account using site-onboarding and device-connectivity counts and percentages.

Metrics

- Sites onboarded — sites that completed the onboarding process.
- Devices connected — cameras or devices currently connected across those sites.

How to interpret it

A high site-onboarding percentage with a low device-connectivity percentage usually means the site records exist but devices are not yet streaming or are offline.

A complete rollout requires both the intended sites and their expected devices to be active.

When to act

Investigate device credentials, network connectivity, device status, and alarm forwarding when connected-device progress trails site onboarding. Confirm the expected device count for each site before treating the rollout as complete.
