## What the Admin Guide Covers

As a GCXONE administrator, this guide walks you through everything you need to run and maintain your deployment — from your first look at the Dashboard through configuring alarms, roles, sites, devices, and users.

## Who This Guide Is For

Administrators responsible for configuring GCXONE for their organization: orienting new admins to the platform, defining roles and permissions, managing sites and devices, configuring alarm rules, and onboarding users.

## What's in This Section

- **Dashboard Overview** — A full walkthrough of the Dashboard's KPI cards, charts, sidebar modules, and top bar controls.
- **Admin Training** — The structured onboarding path for new administrators, covering network requirements, system setup, pre-launch tasks, and ongoing monitoring cadences.
- **Alarm Configuration** — How to define and tune alarm rules across your sites and devices.
- **Managing Roles & Permissions** — How to create roles and control what each role can see and do.
- **Site & Device Management** — How to add, organize, and maintain sites and devices.
- **User Management** — How to invite, edit, and remove user accounts.

## Suggested Reading Order

New admins typically move through this section as: Dashboard Overview → Site & Device Management → User Management → Managing Roles & Permissions → Alarm Configuration. Admin Training is a supplementary deep-dive you can return to at any point.
