PulseView

Updated 11 August 2026

What PulseView Does

PulseView takes your live camera feeds and turns them into professional timelapse videos — automatically.

You pick the camera and the timeframe, and PulseView handles everything else. No editing software, no manual scrubbing, no extra steps. Just clean, ready-to-share output.

It's built for long-term projects and site monitoring, giving operators, admins, and clients immediate visual context without sitting through hours of footage.

Why It Matters

Admins deal with footage requests constantly — and every request means manual review. That time adds up faster than most teams realize.

PulseView eliminates that entirely. Instead of spending hours pulling and reviewing footage, you get compliance-ready visuals automatically, with professional output that holds up in client meetings and audits. For organizations running regular reporting cycles, that kind of efficiency translates to real savings — €10k+ annually for many teams.

How It Works

Select the camera you want, define the timeframe, and let PulseView do the rest. It processes the footage and generates the timelapse automatically — no editing required, no back-and-forth, no waiting.

The result is professional-grade video that's immediately ready to share or review.

Key Capabilities

- **Automatic Timelapse Generation:** Converts raw camera feeds into condensed timelapse videos without any manual input
- **Zero Editing Required:** The timelapse is created instantly — what used to take hours now takes seconds
- **Professional-Grade Output:** High-quality video ready for client reporting, compliance documentation, and stakeholder presentations
- **Built for Long-Term Projects:** Ideal for construction sites, infrastructure projects, and any scenario that requires ongoing site monitoring
- **Visual Reporting:** Delivers the visual context your team needs to support compliance requirements and keep clients informed

Real-World Use Cases

- A project manager needs to show a client three months of construction progress. Instead of compiling footage manually, PulseView puts together a clean timelapse in seconds — ready to present on the spot.
- A security provider faces a compliance audit. Rather than reviewing hours of recordings, they generate timelapse evidence through PulseView that meets documentation requirements immediately.
- An operations team monitors infrastructure across multiple sites over an extended period. PulseView produces visual summaries that make it easy to spot trends and report progress to leadership — without anyone having to sit through raw footage.
- An admin team that handles frequent footage requests from stakeholders cuts the time spent per request from hours to seconds, freeing the team up for work that actually needs their attention.
